

KARIM EL SAYED

Manager – Spacecraft Analysis (Payload Performance | Fleet Health Data | Link Budget | Anomaly Management)

Base: Abu Dhabi, United Arab Emirates | **Phone:** +971 55 770 4182 | **Email:** karim.elsayed@protonmail.com | **LinkedIn:** linkedin.com/in/karim-el-sayed-spaceops

Professional Summary

Spacecraft operations and analysis professional with 10 years of experience supporting fleet health monitoring and payload performance investigations in satellite telecommunications environments. Strong in telemetry-driven anomaly triage, technical reporting, and cross-discipline coordination (ground + spacecraft). Comfortable owning on-call decision-making and working with KPIs and SLA targets. Developing deeper expertise in end-to-end procurement leadership and automation programs, with a track record of contributing to operational product onboarding and structured in-house test plans.

Key Competencies

- Payload performance monitoring & investigations
- Link budget performance calculation (C/N0, EIRP, G/T, margin tracking)
- Fleet health data analysis (telemetry trends)
- Anomaly management & closeout reporting
- Cross-discipline issue investigation (ground + spacecraft)
- On-call operations leadership
- KPI/SLA tracking & reporting
- Project support: operations test plans, acceptance criteria
- Vendor/support contract coordination
- OPEX/CAPEX tracking (supporting role)

Professional Experience

Spacecraft Analysis Lead (Payload & Fleet Health)

OrbitLink Space Services – Abu Dhabi, UAE | *Apr 2021 – Present*

- Led payload-focused health monitoring for in-orbit satellite communications assets; produced monthly fleet health and anomaly trend reports for management stakeholders.
- Performed investigative analysis for degraded payload performance using telemetry, event timelines, and ground observations to propose probable root causes and corrective actions.
- Convened and chaired Anomaly Review Board (ARB) sessions for complex payload and interference-related events; tracked action items through closeout and verified evidence quality.
- Supported contingency operations by providing analysis inputs and safety checks; ensured timely communication of operational risks and mitigations during on-call duty.
- Maintained link budget performance dashboards for selected beams/services; flagged margin degradations and collaborated with RF/ground teams to validate causes (weather, interference, equipment drift).
- Coordinated support contracts for payload-related investigations (vendor tickets, log bundles, technical clarifications) and ensured SLA-aligned follow-ups.

Satellite Operations Engineer

MENA Satcom Operator – Abu Dhabi, UAE | *Aug 2015 – Mar 2021*

- Executed routine spacecraft operations and monitoring (24/7 environment), supporting safe and timely command execution and housekeeping activities.
- Assisted in anomaly triage across multiple subsystems; prepared incident reports and supported lessons-learned updates to procedures.
- Contributed to onboarding activities for a new satellite from an operations center perspective (SOC readiness): procedure review, simulation support, shift training, and acceptance checklists.

Selected Projects & Contributions

- **Operations Product Onboarding Support** (2023): Helped define acceptance checks and structured in-house test procedures to complement supplier testing for an operations monitoring add-on; documented test outcomes and gaps.
- **Interference Investigation Workflow** (2022): Coordinated a multi-discipline investigation involving a

ground interference management component and spacecraft payload observations; improved reporting template consistency.

- **Fleet Health Reporting Refresh** (2021): Redesigned monthly reporting to include anomaly categories, trend indicators, and action status to improve management visibility.

Education

Bachelor of Engineering (BEng), Electrical Engineering

Cairo University – Cairo, Egypt | 2011 – 2015

Certifications & Training

- Satellite Operations Foundations (telecom ops training program)
- RF & Link Budget Essentials (professional short course)
- Project Management Fundamentals (internal program)

Tools & Technical Skills

Data & Analysis: Python (pandas basics), Excel (advanced), Power BI (intermediate), SQL (basic)

Operations: Telemetry trend analysis, event timeline reconstruction, anomaly reporting, ARB facilitation (as needed)

Link Budget: Basic-to-intermediate calculations (EIRP, G/T, C/N0, Eb/N0, margins), performance tracking dashboards

Ways of Working: KPI/SLA tracking, structured reporting, vendor coordination, on-call duty handover notes

Leadership & Development

- Mentored junior engineers on reporting quality and anomaly closeout documentation.
- Improving procurement leadership exposure by shadowing vendor evaluations and participating in requirements workshops.

Languages

English (Fluent) • Arabic (Native)

Interests

Telemetry analytics • Operational reliability • Spacecraft payload performance • Automation tooling (human-in-the-loop)
